

Ablatherm FDA Study in Triangle Business Journal

EDAP's Ablatherm-HIFU FDA clinical study was recently featured in the Triangle Business Journal. The article is viewable online at

<http://triangle.bizjournals.com/triangle/stories/2006/07/17/focus4.html> .

A patient treated at Duke University Medical Center is quoted along with the urologist performing the procedure.

The patient, aged 57, was released 4 hours after his treatment start time as compared to a hospital stay of up to 7 days following surgery.

Dr. Cary Robertson of Duke University describes the procedure and references clinical evidence from Canada and Europe where HIFU has been fully approved for use in treating localized prostate cancer.
